webPOISONCONTROL®: What You Will See

1. Before we begin...
   Stay calm and let us guide you. Take the time to give us accurate information so we can provide the right recommendation.

2. Does your current situation involve any of these:
   - Child younger than 6 months?
   - Adult older than 79 years?
   - Pregnant woman?

3. Was this a suicide attempt or self-harm?
   - YES
   - NO
   (Note: I'm just testing the tool. This is not a real case.)

4. How much of this product did she take?
   Select one of the following that best describes the amount:
   - WHOLE PILL(s)
   - PARTIAL PILL
   - WASTE OR LICK
   - I DON'T KNOW

5. How long ago was the exposure?
   When did she take the Tylenol PM Extra Strength 25 mg-500 mg tablet?
   - Days
   - Hours
   - 16 Minutes Ago
   - I DON'T KNOW HOW LONG AGO

6. Our recommendation
   Based on the information you provided, it is unlikely that significant toxicity will develop. You do NOT need to go to the Emergency Room. Follow the Instructions provided regarding what to do next, symptoms to watch for, and when to call Poison Control for additional help.

   What should you do now?
   - Call Poison Control if any other medications containing acetaminophen were taken in the last 24 hours.
   - Supervised napping is okay. Make sure an adult stays with the exposed person until fully rested and awake.
   - Gently awaken the individual every 20 minutes while napping. If breathing is abnormal or the person will not awaken, call 911.
   - Check with Poison Control (1-800-222-1222) to confirm there are no expected interactions if the exposed person is taking other medications.

   Adults & Teens: Do not drive, operate heavy machinery, participate in contact sports or drink alcohol until the effects wear off.

   These are common symptoms that might occur:
   - nausaea
   - vomiting
   - drowsiness (awakens with gentle stimulation)
   - agitation, irritability, or lightheadedness
